Summary

Full-Stack Software Engineer, strongest in React, Node.js and modern JavaScript, who builds and runs multi-tenant SaaS products from requirements to production. Founder of **POSitive**, a live billing platform for food businesses backed by **960+ automated tests**. At GroupTakey, leads development of five subscription products that serve **100+ paying businesses** and earn **over INR 10 lakh a year**, and at Friendly Infotech has delivered **10 client projects in 17 months**. Works with SQL and NoSQL databases through Prisma and Mongoose, and ships faster with Claude Code and GitHub Copilot.

Skills

Frontend: React, JavaScript, HTML5, CSS3, Tailwind CSS, SCSS, Zustand, TanStack Query, React Router, Vite
Backend & Data: Node.js, Express, REST, GraphQL, Prisma, Mongoose, MongoDB, MySQL, Firebase, PHP, Razorpay
AI Tools: Claude Code, Claude and GitHub Copilot for code generation, refactoring, test writing, code review and debugging
Testing & DevOps: Vitest, Supertest, Playwright, load testing, Git, GitHub auto-deploy, Linux VPS, Hostinger, Netlify
Engineering: Multi-tenant SaaS, RBAC, offline-first design, application security, Core Web Vitals, requirement analysis

Product

POSitive | *Founder & Software Engineer* **Jul 2026 – Present**
Tech: React, Node.js, Express, Prisma, MySQL (MariaDB), Vitest, Supertest

- Built and launched **simplypositive.app**, a multi-tenant billing SaaS for food shops and restaurants with counter billing, QR ordering with UPI checks, kitchen screen, waiter ordering on phones, recipe-based inventory and a live multi-outlet owner view, now onboarding a **6-outlet food chain as its launch customer**, handling its setup and staff training.
- Built for weak networks and low budgets: **offline billing** that syncs on reconnect, atomic stock updates that stop overselling, an HTTP pulse in place of WebSockets on shared hosting, monthly archiving that keeps storage small, and MySQL through Prisma because shared hosting includes it free and Prisma keeps a PostgreSQL move simple.
- Secured the platform with TOTP two-factor login, strict CSP, rate limiting, HMAC-verified payment webhooks and 180-day audit logs per CERT-In directions and the DPDP Act, plus role-based access for owners, managers, cooks and waiters.
- Shipped with **960+ automated tests** against a real MariaDB database and a **100-outlet load test at 3x lunch peak**: 6,300+ requests, **zero errors** and 95th-percentile responses under 90 ms on a 5-connection database pool.
- Reached **100 desktop and 98 mobile** on Lighthouse with a 2.1 s mobile LCP through pre-rendering and code splitting, and built a Super Admin console for plans, add-ons, trials and store activation, plus a demo isolated from real data.

Experience

GroupTakey | *Software Engineer (Contract)* | *Letter* **Nov 2025 – Present**

- Led end-to-end development of five SaaS products on a **revenue-share contract**: Billants (GST billing), Beyond Healthcare (hospital management), Supervision (school ERP), Auctison (live auctions) and Cyber Desk (event check-in).
- Designed a **multi-tenant architecture** with a separate database for each customer, role-based access and daily backups, on MySQL and MongoDB, and built core modules for GST billing, patient records, real-time bidding and barcode check-in.
- Chose React with Node.js for heavier products and PHP with MySQL for lighter ones, because Hostinger's Business plan runs PHP and MySQL natively but allows only five Node.js apps, and moved products to VPS servers as load grew.
- Led the team on selected products, planned roadmaps from customer feedback and sped up delivery with Claude Code.
- Together, these five products serve **100+ paying business customers** with **1,000+ staff logins**, handle high daily transaction volumes and generate **over INR 10 lakh in annual recurring revenue** from subscriptions.

Friendly Infotech | *Software Engineer (Freelance)* | *Letter* **May 2025 – Present**

- Delivered **10 client projects in 17 months** across healthcare, real estate, financial services and business, including Medi Panel, Sparsh Hospital, Sofia HMS, Wasi Property and Shree Dhankuber, as the clients' primary technical contact.
- Turned business needs into scope, timelines and architecture, chose MERN or LAMP by budget and scale, designed databases, built REST APIs, integrated third-party services and handled testing, releases, hosting, domains and DNS.

Education

Silver Oak College of Engineering & Technology, Silver Oak University **Aug 2022 – May 2025**
B.Tech (Lateral Entry), Computer Engineering | *CGPA 9.19* *Ahmedabad, Gujarat*

Government Polytechnic Ahmedabad, Gujarat Technological University **Jul 2019 – May 2022**
Diploma, Computer Engineering | *CGPA 9.44, First Class with Distinction* *Ahmedabad, Gujarat*
